Description of change:

Added a new controller and view for the new product Ceiling and Visibility. Added new function in WebImageSets model to request CV data from the database.

Test Plan:

navigate to<http://www.aviationweather.gov/adds/cv> and click on the map. Select various time steps and the different products to verify data is being generated properly.

System Impact: Minimal, added new images to the /caws file share

User impact: Medium - adding new displays to the web site
